Phone Tracking App

With the GPS functionality of android phones, SaHarsh presents Mobile phone tracking application for personal tracking. Once it is installed, the phone can be tracked online remotely. It is very useful to track sales and service team. It keeps your family especially your college going teenagers and loved ones safe by tracking their exact location. Many of us forget to pick our phone up from restaurant's table, shops, and from many other public places and unfortunately lose an expensive mobile. In such cases this app is useful to recover your phone.

Features:

- Real time tracking of Mobile Phone.
- Creation of geo fencing - a virtual territory, and get alerts on entry and exit of it.
- Creation of Point of interest - particular location, to check whether target has reached there or not. This feature is specially used for sales and service team to check whether they have attended sales or service calls respectively.
- Travel History with route map for more than 90 days.
