Smart Eye – Premium with Fuel Level Sense GPS Vehicle Tracking System

SaHarsh Solutions

SaHarsh Solutions presents Smart Eye, A Vehicle Tracking System with combination of user friendly software and robust hardware. This system can locate any vehicle on real time basis. User can monitor and manage his fleets and can take useful decisions from the data he gets.

Features:

- **Real time tracking:** Vehicle can be tracked in real time on computer by web based platform and on Mobile Phone by Android App.
- **Travelling History:** You can Play back/ replay the vehicle's past movement for more than 1 month with travelled route map, travelling time, speed, distance, Fuel Level etc.
- **Fuel Tank Level:** User can watch Vehicle's Fuel tank level in real time. Server also records the fuel level along with vehicle movement. So user can view Vehicle travelling history log along with respective fuel level. The theft of fuel can be stopped smartly using this feature.
- **Ignition Status:** User can view status of Vehicle Ignition status online.
- **Over-speed alert:** You can define certain speed. When vehicle moves more than this restricted speed, it will send an alert message.
- **Inbuilt Memory:** Device has inbuilt memory to store location and other event data when there is no network coverage. Once it comes back to network coverage then device will automatically push data to web-platform so that travelling history does not get lost.
- **Geo-Fence:** Geo-Fence is a virtual area or boundary of certain territory. You can define certain area on Map. If vehicle goes in or out of that area then it will alert with SMS.

User can get various alerts according to his requirements and can generate different reports for selected time.

Reports:

- Fleet Summery Report: It's a report of total travelling distance of vehicle
- Fuel Report
- Speed monitor Report
- Ignition Report
